

Seedling Mix 100

Product Description

A fine-textured growing media designed for early-stage propagation. Engineered to provide high moisture retention and a soft, uniform structure that supports delicate root development.

Formulated With

- Fine Canadian Peat Moss
- Coco Coir
- Coarse Perlite
- Dolomite Limestone (pH adjustment)

Engineered For

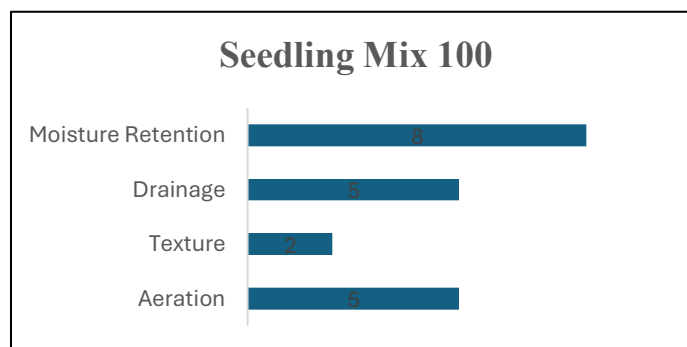

- Seed starting and propagation
- Plug trays and liner production
- Applications requiring consistent moisture and low compaction

Physical Properties

- **Moisture Retention:** High
- **Drainage:** Moderate
- **Texture:** Fine
- **Aeration:** Moderate

Performance Characteristics

- Promotes uniform germination
- Maintains consistent moisture levels
- Supports early root development
- Provides controlled water distribution

Relative scale shown for comparison purposes only.

Available Formats

- Bulk (loose material)
- Supersack (upon request)

Add-On Options

Available upon request:

Silicon · Wetting Agent (Standard or Organic) · Worm Castings · Mycorrhizae · Kelp · Vermiculite · Starter Charge · Bat/Bird Guano · Pumice · Custom Additions

Important Information

This product is a blended growing media. Composition may vary due to the natural variability of raw materials. Product is not intended to provide significant plant nutrition.
